

FORMULA E'S PROGRESS AGAINST THE UNFCCC PRINCIPLES

Principle 1: Undertake systematic efforts to promote greater environmental responsibility

- This is defined within Formula E's company vision, policies (Sustainable Development, Sustainable Procurement, Environmental Health & Safety) and our Event Specifications;
- We have a standalone sustainability programme which has three pillars:
 1. Delivering a sustainable event;
 2. Positively impacting our host cities;
 3. Raising global awareness on air pollution and climate change;
- We have adopted ISO20121 as well as the FIA Environmental Certification Accreditation to reach responsible environmental performance.

Principle 2: Reduce overall climate impact

- We use our lifecycle assessment to calculate our carbon footprint and identify areas to reduce our impact – in season 5 our key contributors were: 72% freight, 14% staff, 6% spectators;
- We are a member of RE100 as we aspire to switch to 100% renewable energy.

Principle 3: Educate for climate action

- We work closely with UNEP on their #BreatheLife and #BeatAirPollution campaigns to advance our shared interest in improving air quality.

Principle 4: Promote sustainable and responsible consumption

- We monitor and measure our impacts using our lifecycle assessment;
- We provide and encourage recycling at 100% of our events, and recycled 52% of our waste in season 5;
- We will always provide vegetarian/vegan options on site and will source locally to reduce impact;
- We do not provide spectator parking and encourage spectators to use public transport to attend our events.

Principle 5: Advocate for climate action through communication

- We raise awareness for climate action through the use of:
 1. Social media – Instagram, YouTube
 2. Website – a dedicated section on sustainability
 3. Athletes as climate ambassadors – Lucas di Grassi is our Clean Air Ambassador with UNEP
